

# GREGG DRILLING LLC

## AMPHIBIOUS SERVICES

### Overview

Gregg's amphibious platform is a useful tool for difficult access sites such as marshes, sediment ponds, tailing impoundments, and inter-tidal zones. The amphibious platform can be outfitted with drilling, CPT and environmental sampling tools depending on the specific project requirements.

### Features

- Effective for access to sites with too much water that would prohibit truck access but too little water to float a barge
- Exerts low ground pressure on 2-tracks ( 1.75-3psi depending on load)
- Can be safely floated and used as a barge in shallow water
- Delivered to site on two standard truck loads and assembled on-site with use of a crane

### Specifications

Amphibious unit weight (unloaded)	21,000 lbs
Deck capacity	12,000 lbs
Ground pressure	1.75-3 psi
Pontoon dimensions (LxWxH):	26' x 4' x 4.5'
Deck dimensions (LxW):	26' x 14'
Operation:	Dry land or floating in 1.5m water up to 20m (sheltered)

### SERVICES:

- Mud rotary drilling & geotechnical sampling
- Piezocone Testing (CPT) & Seismic CPT
- Vibrocore sampling
- Gravity coring & benthic sampling
